

ERROR404.NET

Personal brand guidelines – 90s warez-scene ASCII, arcade neon, and new-wave hacker, carried across the lab, the web presence, and everything printed.

```
!ignore → return "404: Message not found"
```

01 Direction

ACiD/iCE-style ANSI group logos and boxed `.NFO` release tables, CRT/VHS chromatic-aberration glitch text, 80s–90s arcade cabinet neon geometry, phone-phreaking iconography as a texture accent. Avoid corporate SaaS gradients, soft rounded cards, and any "clean flat design" pass that sands off the CRT/ANSI texture – the texture *is* the brand.

02 Color – Arcade New Wave

LOCKED

One background, one foreground, max two accents per surface. Each accent keeps a fixed meaning rather than swapping per surface.

03 Logo system

Primary mark FINAL – APPROVED – a node-link graph built from the real **Libra constellation**: star positions and magnitudes plotted from real astronomical data (Zubenelgenubi, Zubeneshamali, Zubenelakrab, Brachium, and its tail pair), with **404** centered in the scales' shape. No ring, no oval – the mark sits directly against the background. The constellation line running through the wordmark is drawn as a single continuous diagonal that pauses only for the glyphs themselves: on the right side of the Ø it breaks exactly on the character's slash angle (measured off the rendered glyph, not estimated – the line and the slash read as one unbroken stroke), and the lower node was repositioned so that same line carries the identical angle in from the left. The logo

is optimized for transparency against varying background images.

Canonical default – multicolor nodes, mint connecting line

For dark backgrounds – white

Authorized accent colors: The Arcade New Wave palette (blue, pink, yellow, mint) are authorized for single-color accent variants on dark backgrounds. Custom colors require design review.

MONOGRAM – ICON-ONLY, NIGHT / DAYLIGHT MODE

Monogram is the constellation graph on its own – no "404" wordmark. Because there's no glyph to route around, the line that pauses at the Ø in the primary mark is drawn whole here, one unbroken stroke node-to-node. Two approved variants, both flat single-tone cuts on a transparent background: **Daylight mode** (dark mark, for light surfaces) and **Night mode** (light mark, for dark surfaces). This is the version used everywhere a small or standalone icon is needed – favicons, app icons, Entra/M365 square logos, email-inline marks – replacing the older ring-and-oval icon cuts.

Night mode – white, transparent

ENTRA / M365 SQUARE LOGO – TRANSPARENT

Microsoft Entra ID and the M365 admin center composite the square logo onto their own theme background, so a flat opaque fill reads as a box. These are transparent-PNG cuts of the Monogram instead: daylight (black) for the light-theme slot, night (white) for the dark-theme slot, and full color for either.

Transparent white – dark theme

404

Transparent color – either theme

404.NET

!ignore → return "404: Message not found"

Icon + wordmark lockup (404.NET)

LEGACY LOCKUP – ERROR404.NET WORDMARK

Full wordmark **ERROR404.NET**, full ANSI/glitch treatment – still valid anywhere the full domain name should read out loud (headers, hero lockups, merch, business cards). The Libra mark above is the icon of record wherever a mark stands alone.

04 Typography

Display / ASCII wordmark

UI body text

JetBrains Mono – Entra/M365
sign-in copy uses this

05 Two treatment modes

Full color everywhere doesn't survive a printer or a client's inbox – same brand, same voice, one leans into color/glow, the other leans harder on ASCII structure.

DIGITAL – full treatment

- Website, resume site, PowerPoint, merch, social
- Full Arcade New Wave palette
- Full glitch / chromatic-offset lockup
- Neon glow, scanlines, drop-shadow texture

PRINT / CORPORATE – B&W

- Word docs, PDF reports, letterhead, email
- Pure black on white – no color, no glow
- Flat monochrome mark, plain bold monospace wordmark
- ASCII rules (====), bracket fields, :: / ~/ notation carry the identity instead

REPORT // FIELD NOTES

<Report Title Goes Here>

<One-line summary of scope and purpose>

PREPARED BY:	<Your Name>	DATE:	<YYYY-MM-DD>
STATUS:	DRAFT	REF:	ERROR404-<NNN>

1. SUMMARY

Body copy runs here in a clean, legible monospace – the ASCII/terminal identity carries through in structure (rules, bracket fields, section numbering) rather than color or glow, since this version is built to survive black-and-white printing and Word/PDF export.

--- // ---

2. FINDINGS

- > finding one
- > finding two
- > finding three

06 Email signature

Print/Corporate mode, since email is functionally a plain-text medium.

```
<Your Name> ~/ <you@error404.net> :: <phone>  
!ignore → return "404: Message not found"
```

Format shown above – the real signature (with your actual contact details) stays in your private guideline docs, not on the public site.

EMAIL SIGNATURE – CANONICAL

Thanks,

Your Name

~/ you@error404.net :: (000) 000-0000

ERROR404.NET

!ignore → return "404: Message not found"

A richer HTML version for the actual M365/Outlook mailbox – light-touch color (the mark plus a single accent rule), not the full palette, since a signature rides on every outbound message. Source: [email-templates/](#).

07 Templates

Ready-to-use files built from this system – Word, PowerPoint, HTML email, and a dedicated report format. Every file uses `<Bracketed>` placeholders, never real contact details. Browse them all: [logos/](#), [entra-m365/](#), [office-templates/](#), [email-templates/](#), [social/](#), [discord/](#).

WORD / OFFICE

- Corporate B&W report/style-guide template + a Digital/color internal variant
- Letterhead, envelope, standalone cover page
- An Office Theme (.thmx) carrying the palette + IBM Plex Mono

POWERPOINT

- 6-slide widescreen deck: title, section header, content, two-column, pull-quote, closing

HTML EMAIL

- Newsletter/announcement and transactional/notice templates – full-color, opted-in sends
- M365/Outlook signature, standard + minimal

REPORT FORMAT

- Word report doc – metadata, key metrics, severity-tagged findings, recommendations, sources/appendix
- Matching notification email – summary + pointer to the attached full report
